SUBUNIT: May homomultimerize via its SAM domain (By similarity).
Interacts with DLGAPI/GKAP, MGLURIA and MGLURS C-termini via its PDZ domain. Interacts with Homer-1, Homer-2, Homer-3 and CCTN/cortactin SH3 domain. Is part of a complex with DLG4/PSD-95 and DLGAPI/GKAP.
Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Rattus.

nidogen.
-!- SUBUNIT: There are six type IV collagen isoforms, alpha 1(IV)alpha 6(IV), each of which can form a triple helix structure with
2 other chains to generate type IV collagen network.
-!- SUBCELLULAR LOCATION: Cell surface (Potential).
-!- TISSUE SPECTRICITY: Alpha 3 and alpha 4 type IV collagens are
collocalized and present only in basement membranes of kidney, eye,
collocalized and brain.
-!- DOMAIN: Alpha chains of type IV collagen have a noncollagenous
domain (NCI) at their C-terminus, frequent interruptions of the GX-Y repeats in the long central triple-helical domain (which may
cause flexibility in the triple helix), and a short N-terminal
proposition of the triple helix. 귱 WEDLINE-99011253; Pubmed-9792860;

Cochat P., Gruenfeld J.-P., Palacoux J.-B., Gubler M.-C., Antignac C.;
Determination of the genomic structure of the CoL444 gene and of
novel mutations causing autosomal recessive Alport syndrome.";
Am. J. Hum. Genet. 63:1329-1340(1988).
-I. FUNCTION: Type IV collagen is the major structural component of
glomerular basement membranes (GBM), forming a 'chicken-wire'
meshwork together with laminins, proteoglycans and entactin/ Kamagata Y., Mattei M.-G., Ninomiya Y.,
"Isolation and sequencing of cDNAs and genomic DNAs encoding the
alpha 4 chain of basement membrane collagen type IV and assignment of
the gene to the distal long arm of human chromosome 2.";
J. Biol. Chem. 267:23753-23758(1992). PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.

PTM: Type IV collagens contain numerous cysteine residues which are involved in inter- and intramolecular disulfide bonding. 12 of these, located in the NC1 domain, are conserved in all known type IV collagens.

DISEASE: Defects in COL444 are a cause of autosomal recessive VARIANT AS SER-1201.

            characterized by progressive glomerulonephritis, renal failure, hematuria, ocular abnormalities and deafness. The recessive form occurs equally between males and females. The recessive form DISBASE: Defects in COLA44 are a cause of familial benign hematuria (FBH) [MIM:141200] or thin basement membrane disease. FBH is characterized by persistent hematuria, an electron microscopically detectable thin glomerular basement membrane microscopically detectable thin glomerular basement membrane and an autosomal dominant mode of inheritance. Renal function remains normal. In children, differentiation between FBH and AS can be difficult, because both disorders are manifested by SIMILARITY: TO OTHER TYPE IV COLLAGENS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CELL ATTACHMENT SITE (POTENTIAL).

Mol. Genet. 9:2051-2058(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: COLA18A probably plays a major role in determining the retinal structure as well as in the closure of the neural tube. FUNCTION: Endostatin potently inhibits endothelial cell proliferation and angiogenesis. May inhibit angiogenesis by binding to the heparan sulphate protecoglycans involved in growth factor signalling.
                                                                                                                                                                                                                                       SEQUENCE OF 834-1516 FROM N.A. Cell. Biol. 20:3137-3146(2000).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SUBCELLULAR LOCATION: Nuclear (Potential)
SIBSUE SPECIFICITY: Highly expressed in aplean, thymus, prostate, testis, ovary, small intestine, colon, and pbl, and at a much lower level in heart, brain, placenta, lung, liver, skeletal smucle, kidney, and pancreas.
SIMILARITY: Contains 1 ARID domain.
CAUTION: Ref. 2 sequence differs from that shown due to a frameshift in position 1132.
                                                                                                                                                                                                                                                                                                                                                                SMF1 HUMAN STANDARD, PRT; 1902 AA.

T. "Punctional annotation of a full-length mouse cDNA collection.";
I. Nature 409:685-690(2001).
I. PUNCTION: Transcriptional repressor. Binds to the consensus DNA sequence: 5'-da(GT)AN(CG)[AdG]CC-3'. Might protect cells from apoptosis. Might be involved in pre-mRNA splicing (By similarity).

Submitted (NOV-1989) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: THIS IE PROTEIN IS A MULTIFUNCTIONAL PROTEIN CAPABLE
OF MIGRATING TO THE NUCLEUS, BINDING TO DNA, TRANS-ACTIVATING
OTHER VIRAL GENES, AND AUTOREGULATING ITS OWN SYNTHESIS.
-!- SUBCELLULAR LOCATION: Nucleus of infected cells.
-!- FUN: A long stretch of serine residues may be a major site of
phosphorylation.
-!- SIMILARITY: BELONGS TO THE ICP4/IE140/IE180 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cheung A.K.;

Proc. Natl. Acad. Sci. U.S.A. 85:1998-2002(1988).
-!- FUNCTION: Neurofilaments usually contain three intermediate
-!- FUNCTION: Neurofilaments usually contain three intermediate
filament proteins: L, M, and H which are involved in the
maintenance of neuronal caliber.
-!- FTM: There are a number of repeats of the tripeptide K-S-P, NFM is
phosphorylated on a number of the serines in this motif. It is
thought that phosphorylation of NFM results in the formation of
interfilament cross bridges that are important in the maintenance JEQUENCE FROM N.A.

(Yyers M.W., Lazzarini R.A., Lee V.M.-Y., Schlaepfer W.W., Nelson D.L.;

(The human mid-size neurofilament subunit: a repeated protein

sequence and the relationship of its gene to the intermediate PTM: Phosphorylation seems to play a major role in the functioning of the larger neurofilament polypeptides (NF-M and NF-H), the levels of phosphorylation being altered developmentally and coincident with a change in the neurofilament function. SIMILARITY: Belongs to the intermediate filament family. 1887 ITAVEPS--------KPTVLRSTSTSSPVRPAATFPPATHCPLGGTLDGVYPT 1932 L--MEPVLLPKEAPRVARPERPRADTGHAFLAKPPARSGL---------[2] EQUENCE OF ONE OF THE 13 RESIDUR REPEATS.

Biol. 20:340-351(2000).

FUNCTION: Makes part of TFIID is a multimeric protein complex that plays a central role in mediating promoter responses to various activators and repressors. Potentiates transcriptional activation by the AF-2S of the retinoic acid, vitamin D3 and thyroid hormone. SUBUNIT: TFIID is composed of TATA binding protein (TBP) and a number of TBP-associated factors (TAPS). Component of the TFTC-HAT complex, at least composed of TAFSL, TAFSL, TAPSL, SUBTISH/SPT3, TAFSLTAPILISO, TAF4/TAFILISO, TAF4/TAFILISO, TAF10, TAFILISO, TAF10, TAFILISO, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, TAF10, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Davidson I.; "The human TFIID components TAF(II)135 and TAF(II)20 and the yeast SAGA components ADA1 and TAF(II)68 heterodimerize to form histone-like
